CAREER OBJECTIVE

Final-year B.Tech (CSE) student with hands-on experience across IoT, AI/ML, and full-stack development gained through academic projects and an AI & IoT engineering internship. Seeking a Software Developer role to apply strong programming fundamentals, problem-solving ability, and a track record of building end-to-end, production-oriented solutions.

EDUCATION

Vel Tech Rangarajan Dr. Sagunthala R&D Institute of Science and Technology — B.Tech, Computer Science & Engineering 2023 – 2027
Chennai, Tamil Nadu | CGPA: 8.02 (up to current semester)

Sri Chaitanya Junior College — Intermediate (MPC) 2021 – 2023
Vijayawada, India | Percentage: 88.9%

Sri Chaitanya (EM) High School — Secondary School Certificate (SSC) 2021
Rajahmundry, India | CGPA: 10.0/10

TECHNICAL SKILLS

Languages: Java, SQL, Python, JavaScript, HTML

Tools: MySQL, Firebase, AWS IoT Core, Git

Platforms: VS Code, Arduino IDE, GitHub

Soft Skills: Problem Solving, Team Collaboration, Technical Documentation, Agile Methodology

WORK EXPERIENCE

AI & IoT Engineering Intern | Red and Blue Innovations, Hyderabad June 2025 – July 2025

- Worked within the AI team as part of a cross-functional technical group to design production-ready integration architectures combining IoT sensors and automated machine learning workflows.
- Contributed to end-to-end pipeline design connecting sensor data acquisition with automated ML-based processing for real-time decision support.
- Collaborated with engineers across disciplines to test and refine IoT-ML integration components during the two-month on-site engagement.

PROJECTS

Smart AI-Enabled Medical Supplies Pack ESP32, RFID, MQTT, Predictive AI

- Developed an automated inventory tracking kit for emergency medical units to eliminate manual auditing errors and prevent critical stockouts.
- Integrated RFID tags for item identification, weight sensors for quantity tracking, and an SD card module for offline data logging.
- Engineered an IoT pipeline transmitting sensor data via MQTT/HTTP to a cloud database for centralized monitoring.
- Implemented a predictive AI model for demand and expiry tracking, achieving 92% model accuracy with ~1s alert response time.

IoT-Enabled Automated Irrigation System ESP8266, MySQL, Web Dashboard

- Built a smart agriculture system, as a community service project, to optimize water usage through automated drip irrigation.
- Integrated soil moisture sensors and real-time weather analytics to dynamically adjust irrigation schedules.
- Structured a relational MySQL database to securely log time-stamped sensor telemetry and threshold configurations.
- Designed a responsive web dashboard for remote soil health monitoring and manual irrigation overrides.

Event Ticketing Platform React.js, Node.js/PHP, MySQL

- Architected a full-stack web application to manage end-to-end event logistics, admin controls, and user ticket booking.
- Engineered a robust MySQL database schema to handle relational tables for user registration, seating, and bookings.
- Built an administrative panel enabling event organizers to manage venue capacity and track sales metrics.
- Developed a responsive frontend with a smooth booking workflow designed to handle high-traffic transactions.
